

Endress+Hauser expands Gerlingen site

With a modern office building, the company is preparing for the future

Liquid analysis technology from Endress+Hauser is used in many areas - for example, when utilities need to ensure the cleanliness of drinking water or pharmaceutical companies want to produce high-quality vaccines. The group is a leading global supplier of measurement and automation technology for process and laboratory applications. The continuous growth is now visible in a new, attractive office building of Endress+Hauser Liquid Analysis in Gerlingen.

Endress+Hauser invested around ten million euros in the new building. It creates space for 150 employees in activity-specific furnished working environments and thus supports collaboration and innovation. The first floor houses a modern media lab for the production and transmission of webinars, explanatory videos and audiovisual media. On the top floor, with a view over the surrounding area of Gerlingen, employees and visitors will find an inspiring conference center with the latest media technology.

Together with Matthias Altendorf, CEO of the Endress+Hauser Group, Dr. h. c. Klaus Endress, President of the Supervisory Board, guests from politics and business, and employees, the new building was officially opened on Friday, July 7, 2023. As a symbol of good cooperation, Matthias Altendorf unveiled a mural by German artist Britta Schmidhauser, consisting of several colored rectangles made of fused glass, as a gift for the site. "If one rectangle were missing, the picture would not be complete," the CEO said as he presented the artwork. "This idea is very transferable to the various Endress+Hauser sites around the world and also applies to all employees."

Sustainable architecture, attractive workplaces

"With this attractive building, we are showing that it is important to us to be an attractive employer for our employees," said Dr. Manfred Jagiella, Managing Director of Endress+Hauser Liquid Analysis and member of the Executive Board of the Endress+Hauser Group. "The building shows its sustainable orientation on the outside with an automatically supplied green facade and on the inside with numerous green walls and a high-quality and functional interior design in which employees can feel very comfortable."

Endress+Hauser Liquid Analysis is one of the world's leading suppliers of measuring points and complete systems for liquid analysis. Intelligent solutions help customers in the environmental and process industries to operate their plants safely, reliably, economically and in an environmentally friendly manner. State-of-the-art production processes ensure the highest quality throughout. Numerous international awards and prizes testify to the innovative strength of Endress+Hauser Liquid Analysis. This is based on the expertise of more than 1,300 employees worldwide at the headquarters in Gerlingen near Stuttgart and at the sites in Waldheim (Saxony), Groß-Umstadt (Hesse), Anaheim (California, USA), Suzhou (China) and Aurangabad (India).

In Endress+Hauser's newest building, great importance was attached to the well-being of the employees.

The Endress+Hauser Group

Endress+Hauser is a global leader in measurement and automation technology for process and laboratory applications. The family company, headquartered in Reinach, Switzerland, achieved net sales of more than 3.3 billion euros in 2022 with a total workforce of nearly 16,000.

Endress+Hauser devices, solutions and services are at home in many industries. Customers thus use them to gain valuable knowledge from their applications. This enables them to improve their products, work economically and at the same time protect people and the environment.

Endress+Hauser is a reliable partner worldwide. Its own sales companies in more than 50 countries as well as representatives in another 70 countries ensure competent support. Production facilities on four continents manufacture quickly and flexibly to the highest quality standards.

Endress+Hauser was founded in 1953 by Georg H Endress and Ludwig Hauser. Ever since, the company has been pushing ahead with the development and use of innovative technologies, now helping to shape the industry's digital transformation. 8,700 patents and applications protect the Group's intellectual property.
